SUMMARY

Computer Science graduate with hands-on experience in full-stack and AI-powered application development. Skilled in React.js, Next.js, API development, and database management. With experience in prompt engineering and building agentic AI systems that automate workflows and integrate with third-party tools. Passionate about problem-solving, continuous learning, and building practical technical solutions.

EDUCATION

Bachelor of Computer Science - Cybersecurity trackMar 2019 - Jun 2024

King Abdulaziz University

GPA: 4.98 / 5

Relevant coursework includes: Software Engineer, Database, Artificial Intelligence, Data Structures, Networks, and Algorithms.

SKILLS

Programming Languages: JavaScript, TypeScript, Python, Java, PHP

Web Development: React.js, Next.js, PHP Laravel, Redux Toolkit, Tailwind CSS

App Development: React Native, Redux

API Development & Testing: RESTful APIs, Postman

Database Management: MySQL, Convex DB

UI/UX Design: Figma

Version Control: Git

IDEs: VScode, Cursor

Other Skills: Prompt Engineering, Problem Solving, Self-Learning, Attention to Detail

EXPERIENCE

Software EngineerJun 2025 - Present

Spiders Mobility

Developed an agentic SaaS system with Next.js and TypeScript, leveraging Convex DB and LangGraph to build tool-augmented LLM agents, secured via Clerk authentication and integrated with third-party API integrations (e.g., Notion, Jira, etc.).

Software DeveloperNov 2024 - May 2025

AVA - A Virtual Advantage Company

Implementing full-stack modifications on a mobile-friendly PHP Laravel website.

Web Developer | Summer TrainingJul 2023 - Sep 2023

WOW Digital Information Technology Company

Worked with the Frappe framework to implement frontend-backend integration for a website using Python, JavaScript, Postman, and Jinja.

PROJECTS

MOPlearn Educational PlatformSep 2024 - Present

Developing a responsive education website using React.js for frontend, and PHP Laravel for backend.

Link: [GitHub Repository](#)

Alkhayr Driver, Volunteer project at Al-Bir societyOct 2023 - Sep 2024

Developed a mobile application using React Native, focusing on building the frontend and managing state with Redux for efficient data handling. Integrated Google Maps functionality to enable turn-by-turn navigation, display the user's current position on the map, and display routes between two points. App Link: [Play Store](#)

AI Simulations for Job Interview Preparation, Graduation projectSep 2023 - May 2024

- UI/UX Design.
- Trained an AI model to extract technical keywords from CVs and job descriptions using Named Entity Recognition (NER) with SpaCy library and SciBERT.
- Trained an AI model for generating follow-up interview questions using T5 model.
- Building datasets from scratch for both models, employing techniques such as web scraping and data collection.

Video Demo: [Watch Video](#)

Gym Database DesignJul 2022 - Sep 2022

- Created ER diagrams, normalized data, and mapped schemas for efficient data management.
- Developed SQL scripts for table creation, constraints, and complex queries using MySQL.
